DETAILED ACTION

- This office action is responsive to the following communication: After-Final Amendment filed on 04/06/2007.
- Amendment for Claim 10 have been entered and made of record.
- Claims 1-9 and Claims 11-24 have been cancelled. Claim 10 is pending in the application.

Allowable Subject Matter

1. Claim 10 is allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose, teach or suggest the claimed limitations of (in combination of with all other limitations), instructing the printer to handle related document data at a selected level of data compression or bit depth, and asking that all or some selected portion of a requested print-preview display be presented in thumbnail fashion. The closest prior art, cited Livingston (US Patent 6,614,454 B1), Chiarabini et al. (US Patent 5,963,216), and Martin et al. (US Patent 6,078,936), teaches a system for utilizing the printer controller in a printer for producing a true print-preview display in the setting of computer structure which is operatively associated both with a screen-display device, and with a printer having a printer controller that is operatively connected to the computer structure, the method comprising: sending a set of related document-printing instructions from the computer to the printer, in association with the sending, enabling user requesting from the printer of a print-preview display, and implementing the requesting via a path which enables user selection of selectable printing look and format options

relating to print aesthetic appearance, spatial and positional page-appearance relationships, and protocol, but fail to teach or suggest the claim limitations as cited above.

Specifically, the prior art of record fails to disclose, teach or suggest: A user method utilizing the printer controller in a printer for producing a true print-preview display in the setting of computer structure which is operatively associated both with a screen-display device, and with a printer having a printer controller that is operatively connected to the computer structure, the method comprising:

from a document application in a computer structure creating a document, and with reference to the created document, sending a set of related document-printing instructions from the computer to the printer,

in association with the sending, enabling user requesting from the printer of a print-preview display,

implementing the requesting via a path which enables user selection of selectable printing look and format options relating to print aesthetic appearance, spatial and positional page-appearance relationships, and protocol, wherein the enabled options are selectable from the list (a) asking for document rendition in a selected one of different color formats, in a grey-scale format, or in a bi-tonal format, (b) instructing the printer to handle related document data in a selected state of data compression and/or bit depth, (c) instructing the printer to handle related document data at a selected level of resolution, and (d) asking that all or some selected portion of a requested print-preview display be presented in thumbnail fashion,

enabling user selections of one or more of such options to be included in the print preview request in association with such sent instructions,

in the printer, on the basis of such sent instructions, generating, via operation of the printer's printer controller, a collection of document print-control data which the printer will directly use to print the created document, and in response to the print-preview display request, sending back to the computer structure a print-preview data stream based exactly upon the generated print-control data collection as affected by any such user-selected options, and

through cooperative interaction between the computer structure and the screen-display device, creating on the screen-display device from that sent back data stream a true-print preview display, which exactly shows what the printer will print from the associated, underlying print-control-data collection, with such display being affected by any such user-selected options", as claimed in **Claim 10**.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
